Description

The HMα2 monoclonal antibody reacts with mouse CD49b, the 150 kDa integrin α_2 subunit. The complex of CD49b non-covalently associated with integrin β_1 (CD29), also known as VLA-2, is a receptor for collagen and laminin. This complex is expressed by some $CD4^+$ T cells, IEL, NK cells, platelets and epithelial cells.

Applications Reported

The HMα2 antibody has been reported for use in flow cytometric analysis.

Applications Tested

The HMα2 antibody has been tested by flow cytometric analysis of mouse splenocyte suspensions. This can be used at less than or equal to 0.125 µg per test. A test is defined as the amount (µg) of antibody that will stain a cell sample in a final volume of 100 µL. Cell number should be determined empirically but can range from 10^5 to 10^8 cells/test. It is recommended that the antibody be carefully titrated for optimal performance in the assay of interest.
