

## Anti-Mouse CD272 (BTLA) Purified

Catalog Number: 14-5950

Also Known As: B and T lymphocyte attenuator

RUO: For Research Use Only

### Product Information

Contents: Anti-Mouse CD272 (BTLA) Purified

**REF** Catalog Number: 14-5950

Clone: 6F7

Concentration: 0.5 mg/ml

Host/Isotype: Mouse IgG1, κ

Formulation: aqueous buffer, 0.09% sodium azide, may contain carrier protein/stabilizer

Temperature Limitation: Store at 2-8°C.

Batch Code: Refer to Vial

Use By: Refer to Vial

Caution, contains Azide

### Description

The BTLA antibody reacts with mouse BTLA, B and T lymphocyte attenuator. BTLA is expressed by peripheral lymphocytes, splenic macrophages, developing B cells in the bone marrow and developing T cells in the thymus and mature, but not immature bone marrow-derived dendritic cells. BTLA has been implicated as a negative regulator of the activation and/or function of various hemopoietic cell types. It is reported that BTLA binds to B7-H4, but further studies are needed to confirm this interaction.

Note: The anti-mouse BTLA monoclonal antibody 6F7 is reported to stain CD4<sup>+</sup> and CD8<sup>+</sup> single-positive (SP) thymocytes (Hurchla et al). However, other anti-mouse BTLA clones generated simultaneously with 6F7 (8F4, 3F9.D12, 6G3 and 6H6) do not stain SP thymocytes . It is not understood why there is a discrepancy in thymocyte staining however clones 8F4, 3F9.D12, 6G3 and 6H6 stain similar populations to 6F7 in splenocytes and bone marrow cells.

### Applications Reported

Purified anti-mouse BTLA (B and T lymphocyte attenuator) has been reported for use in flow cytometric analysis.

### Applications Tested

Purified anti-mouse BTLA (B and T lymphocyte attenuator) has been tested by flow cytometric analysis of mouse splenocyte suspension. This can be used at less than or equal to 0.5 µg per test. A test is defined as the amount (µg) of antibody that will stain a cell sample in a final volume of 100 µL. Cell number should be determined empirically but can range from 10<sup>5</sup> to 10<sup>8</sup> cells/test. It is recommended that the antibody be carefully titrated for optimal performance in the assay of interest.
