

## Anti-Human Foxp3 Staining Set Alexa Fluor<sup>®</sup> 488

Catalog Number: 73-5776

Also Known As: Forkhead Box P3, Scurfin, JM2, Treg, PCH101

RUO: For Research Use Only

Normal human peripheral blood cells were surface stained with Anti-Human CD4 PE (cat. 12-0049) and Anti-Human CD25 APC (cat. 17-0259) then fixed and permeabilized using the Foxp3 Staining Buffers (cat. 00-5523) and subsequently stained with Rat IgG2a  $\kappa$  Isotype Control Alexa Fluor<sup>®</sup> 488 (cat. 53-4321) or Anti-Human Foxp3 Alexa Fluor<sup>®</sup> 488. Cells in the lymphocyte gate were used for analysis.

### Product Information

Contents: Anti-Human Foxp3 Staining Set Alexa Fluor<sup>®</sup> 488

**REF** Catalog Number: 73-5776

Clone: PCH101 Set

Host/Isotype: Rat IgG2a,  $\kappa$

 Temperature Limitation: Store at 2-8°C. Light sensitive material. Use within 6 months of receipt or by date indicated on the bottle.

**LOT** Batch Code: Refer to Vial

 Use By: Refer to Vial

 Caution, contains Azide

### Description

eBioscience offers a panel of monoclonal antibodies to different epitopes of human Foxp3, providing useful tools for investigating the complete expression pattern of Foxp3 at the protein level, and discerning the precise subsets of Foxp3<sup>+</sup> cells. Please contact [tech@ebioscience.com](mailto:tech@ebioscience.com) or 888.810.6168 for any additional assistance.

The PCH101 antibody reacts with the amino terminus of human foxp3 protein also known as FORKHEAD BOX P3, SCURFIN, and JM2; cross reactivity of this antibody to other proteins has not been determined. Foxp3, a 49-55 kDa protein, is a member of the forkhead/winged-helix family of transcriptional regulators, and was identified as the gene defective in 'scurfy' (sf) mice. Constitutive high expression of Foxp3 mRNA has been shown in CD4+CD25+ regulatory T cells (Treg cells), and ectopic expression of foxp3 in CD4+CD25- cells imparts a Treg phenotype in these cells.

Intracellular staining of human peripheral blood mononuclear cells (PBMCs) with PCH101 antibody using the anti-human Foxp3 Staining Set and protocol reveals approximately 0.5-4% of lymphocytes staining, with the majority of staining occurring in the CD25<sup>bright</sup> population. This is subject to donor variability.

PCH101 crossreacts with rhesus, chimpanzee and cynomolgus. We recommend the use of CD4 (OKT4, cat. 11-0048, or RPA-T4, cat. 11-0049, depending on the species) and CD25 (BC96, cat. 17-0259). Please refer to our crossreactivity table for more information.

### Applications Reported

This PCH101 Set antibody has been reported for use in intracellular staining followed by flow cytometric analysis.

### Applications Tested

This PCH101 antibody has been pre-titrated and tested by intracellular staining and flow cytometry of human PBMC using Foxp3 staining buffers included in this set and protocol. Please click [here](#) for Staining Protocol (refer to Protocol B: One-step protocol for intracellular (nuclear) proteins). Please refer to the antibody vial for the recommended test volume to use for per test in a 100  $\mu$ l total staining volume.

The set components include:

1. eBioscience Fixation/Permeabilization Concentrate (cat. 00-5123, 30 mls) Store at 2-8°C. Avoid agitation.

This is a 4X stock solution that must be diluted prior to use with the Fixation/Permeabilization Diluent. Dilute 1 part Fixation/Permeabilization Concentrate with 3 parts Fixation/Permeabilization Diluent.

*Caution: This solution contains Paraformaldehyde, which is toxic and a suspected carcinogen. Contact with eyes, skin and mucous membranes should be avoided. Wear proper protective clothing and gloves.*

2. eBioscience Fixation/Permeabilization Diluent (cat. 00-5223, 100 mls). Store at 2-8°C. The diluent is intended to be used in combination with

the Fixation/Permeabilization Concentrate.

3. eBioscience Permeabilization Buffer (10X) (cat. 00-8333, 100 mls) Store at 2-8°C. Dilute to 1x with deionized/distilled water and store at 2-8°C.

*Caution: Harmful if swallowed or irritant by contact. Wear proper protective clothing and gloves.*

Note: The 10x Permeabilization Buffer has a natural tendency to precipitate, however, its function is not affected by this. To clarify, the solution can be filtered after dilution to 1x working solution.

4. Rat IgG2a Isotype control Alexa Fluor 488 (cat 73-4321-71 25 tests). Store at 2-8°C.

5. Anti-Human Foxp3 Alex Fluor 488 (cat 53-4776, PCH101, 25 tests) Store at 2-8°C

Not included:

Flow Cytometry Staining Buffer Stain Buffer (Cat. 00-4222)

Surface markers such as anti-CD4 (cat. 12-0049 or 11-0049) and APC or PE anti-CD25 (clone BC96) (cat. 17-0259 or 12-0259)

Special Notes

Please see the following link for FAQ regarding the usage of eBioscience Foxp3 reagents:

<http://www.ebioscience.com/ebioscience/Foxp3FAQs.htm>

The staining protocol has been optimized with Ficoll prepped PBMCs. The use of lysed whole blood is not recommended.

It is critical that this antibody be used in conjunction with the Foxp3 Staining Buffers (cat 00-5523) for flow cytometric analysis.
