

Product Data Sheet

APC anti-mouse CD115 (CSF-1R)

Catalog # / Size: 135509 / 25 µg

135510 / 100 μg

Clone: AFS98 **Isotype:** Rat IgG2a, κ Reactivity: Mouse

Preparation: The antibody was purified by affinity chromatography, and conjugated with

APC under optimal conditions. The solution is free of unconjugated APC and

unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.

Concentration: 0.2 mg/ml

Storage: The antibody solution should be stored undiluted at 4°C and protected from

prolonged exposure to light. Do not freeze.

Applications: FC - Quality tested

Recommended Usage: Each lot of this antibody is quality control tested by immunofluorescent

staining with flow cytometric analysis. For immunofluorescent staining, the suggested use of this reagent is $\leq 0.25~\mu g$ per 10^6 cells in 100 μl volume. It is recommended that the reagent be titrated for optimal performance for each

application.

Application Notes: Additional reported applications (for the relevant formats) include: Blocking of

ligand binding¹. The LEAF™ purified antibody (Endotoxin <0.1 EU/µg, Azide-Free, 0.2 µm filtered) is recommended for functional assays.

Description: CSF-1R, also known as CD115 and M-CSFR, is a single-pass type I

membrane protein and member of the platelet-derived growth factor receptor family. This c-fms (Fms proto-oncogene) gene product's natural ligands include M-CSF and IL-34. Structural studies of CD115 have described an Ig-like extracellular domain, a transmembrane domain, an intracellular juxtamembrane domain, a split tyrosine kinase domain, and a C-terminal tail receptor. Receptor activation induces homodimerization in addition to phosphorylation and ubiquitination of intracellular residues. CD115 directly influences tissue macrophage and osteoclast differentiation and proliferation. It is expressed on monocytes/macrophages, peritoneal exudate cells,

plasmacytoid and conventional dendritic cells, and osteoclasts.
