

Product Data Sheet

Purified anti-mouse Notch 2

Catalog # / Size: 130702 / 500 µg

Clone: HMN2-35

Isotype: Armenian Hamster IgG Immunogen: Notch 2-Fc fusion protein

Reactivity: Mouse

Preparation: The antibody was purified by affinity chromatography.

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.

Concentration: 0.5 mg/ml

Storage: The antibody solution should be stored undiluted at 4°C.

Applications:

Applications: FC - Quality tested IHC - Reported in the literature

Recommended Usage: Each lot of this antibody is quality control tested by immunofluorescent

staining with flow cytometric analysis. For immunofluorescent staining, the suggested use of this reagent is ≤0.25 µg per million cells in 100 µl volume. It is recommended that the reagent be titrated for optimal performance for each

application.

functional differences. The binding of Notch 3 to its ligands results in the proteolysis of Notch and movement of

intracellular portions of Notch into the nucleus. This translocation triggers a series of signaling process. Notch 3 is primarily expressed in adult arterial smooth muscle cells. Notch 3 gene mutation can cause CADASIL, an inherited early stroke syndrome.

highest structural similarity among the four mammalian Notch receptors. Notch 3 has a number of structural and

Description: The Notch receptors are highly conserved from invertebrates to mammals. While Notch1 and Notch2 exhibit the
