

PE anti-mouse PDC-TREM

Catalog # / Size: 139203 / 25 µg
139204 / 100 µg

Clone: 4A6

Isotype: Rat IgG2a, κ

Immunogen: Recombinant soluble PDC-TREM

Reactivity: Mouse

Preparation: The antibody was purified by affinity chromatography and conjugated with PE under optimal conditions. The solution is free of unconjugated PE and unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.

Concentration: 0.2 mg/ml

Storage: The antibody solution should be stored undiluted at 4°C and protected from prolonged exposure to light. **Do not freeze.**

Applications:

Applications: FC - Quality tested

Recommended Usage: Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For immunofluorescent staining, the suggested use of this reagent is ≤1.0 µg per million cells in 100 µl volume. It is recommended that the reagent be titrated for optimal performance for each application.

Application Notes: Additional reported applications (for the relevant formats) include: Western blot¹.

Description: PDC-TREM, also known as plasmacytoid dendritic cell (PDC) -specific receptor, is a member of the TREM receptor family. It is a transmembrane protein composed of an extracellular region with one V-type Ig domain, a transmembrane region with a lysine residue, and a cytoplasmic domain with no recognized signaling motifs. The lysine present in the transmembrane region allows PDC-TREM to form a complex with DAP12 and Plexin-A1. PI3K and Erk 1/2 are involved in the signal transduction of this complex. PDC-TREM is expressed in TLR-activated PDCs and is involved in the production of IFN-α.
