

## **Product Data Sheet**

## Alexa Fluor® 647 anti-rat CD45

Catalog # / Size:	202211 / 25 μg 202212 / 100 μg		
Clone:	OX-1		
Isotype:	Mouse IgG1, κ		
Immunogen:	Enriched glycoprotein fraction from Wistar rat thymocytes	· 같	
Reactivity:	Rat	2 /	
Preparation:	The antibody was purified by affinity chromatography, and conjugated with Alexa Fluor® 647 under optimal conditions. The solution is free of unconjugated Alexa Fluor® 647.	Relative Cell Number	
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.		
Concentration:	0.5 mg/ml		
Storage:	The antibody solution should be stored undiluted at 4°C and protected from prolonged exposure to light. <b>Do not freeze.</b>	10 <sup>0</sup> 10 <sup>1</sup> 10 <sup>2</sup> 10 <sup>3</sup> 10 <sup>4</sup> Log Fluoresence Intensity	
Application	S:	LOU rat splenocytes stained with OX-1 Alexa Fluor® 647	
Applications:	FC - Quality tested IHC, IF - Reported in the literature		
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For immunofluorescent staining, the suggested use of this reagent is $\leq 0.25 \ \mu$ g per million cells in 100 $\mu$ l volume. It is recommended that the reagent be titrated for optimal performance for each application.		
	* Alexa Fluor® 647 has a maximum emission of 668 nm when it is excited at 633 nm / 635 nm. ** Alexa Fluor® 647 is a registered trademark of Molecular Probes, Inc. Alexa Fluor® 647 dye antibody conjugates are sold under license from Molecular Probes, Inc. for research use only, except for use in combination with microarrays and high content screening, and are covered by pending and issued patents.		
Application Notes:	Additional reported applications (for the relevant formats) include: immunoprecipitation <sup>1</sup> , immunofluorescence microscopy (acetone fixed, ammonium-thiocyanate separated epidermal sheets) <sup>2</sup> , immunohistochemistry of acetone <sup>3</sup> -, isopentane- <sup>4</sup> , PLP <sup>5</sup> -, and n-hexane <sup>6</sup> fixed frozen sections and zinc-fixed paraffin-embedded sections, and partial inhibition of NK cell lysis of syngeneic tumor cell lines <sup>1</sup> .

Description:	CD45 is a 180-220 kD protein also known as leukocyte common antigen (LC with multiple isoforms differing as a result of alternative splicing of the extrace expressed on all hematopoietic cells except erythrocytes and platelets; isofor activation state, and cell maturation. CD45 functions in signal transduction th CD45 has been shown to interact with various proteins including galectin-1, 0 has been shown to partially inhibit NK cell-mediated lysis of syngeneic tumor	ellular domain and glycosylation. CD45 is m expression depends on cell type, rough T and B cell antigen receptors. CD2, CD3, and CD4. The OX-1 antibody
