Alexa Fluor® 488 anti-human CD3

Catalog # / Size: 344810 / 100 tests

Clone: SK7

Isotype: Mouse IgG1, κ

Reactivity: Human, Cross-Reactivity: Chimpanzee

Preparation: The antibody was purified by affinity chromatography and conjugated with

Alexa Fluor® 488 under optimal conditions. The solution is free of

unconjugated Alexa Fluor® 488.

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and

0.2% (w/v) BSA (origin USA).

Storage: The antibody solution should be stored undiluted at 4°C and protected from

prolonged exposure to light. Do not freeze.

Applications:

Applications: FC - Quality tested

Recommended Usage: Each lot of this antibody is quality control tested by immunofluorescent

staining with flow cytometric analysis. For immunofluorescent staining, the suggested use of this reagent is 5 μ l per million cells or 5 μ l per 100 $\bar{\mu}$ l of whole blood. It is recommended that the reagent be titrated for optimal

performance for each application.

* Alexa Fluor® 488 has a maximum emission of 519 nm when it is excited at

488 nm.

** Alexa Fluor® 488 is a registered trademark of Molecular Probes, Inc. Alexa Fluor® 488 dye antibody conjugates are sold under license from Molecular Probes, Inc. for research use only, except for use in combination with microarrays and high content screening, and are covered by pending

and issued patents.

Application Notes: Additional reported application (for the relevant formats) include: immunohistochemical staining of frozen tissue

sections^{4,5,8}, immunofluorescent staining⁶, and Western blotting³.

Description: CD3ε is a 20 kD chain of the CD3/T-cell receptor (TCR) complex which is composed of two CD3ε, one CD3γ, one

CD3 δ , one CD3 ζ (CD247), and a T-cell receptor (α/β or γ/δ) heterodimer. It is found on all mature T lymphocytes, NK-T cells, and some thymocytes. CD3, also known as T3, is a member of the immunoglobulin superfamily that plays

a role in antigen recognition, signal transduction, and T cell activation.
