

Anti-Human CD90 (Thy-1) PerCP-Cyanine5.5

Catalog Number: 45-0909

Also Known As: Thy1

RUO: For Research Use Only. Not for use in diagnostic procedures.

Staining of the HEL cell line with Mouse IgG1 K Isotype Control PerCP-Cyanine5.5 (cat. 45-4714) (open histogram) or Anti-Human CD90 (Thy-1) PerCP-Cyanine5.5 (filled histogram). Total viable cells were used for analysis.

Product Information

Contents: Anti-Human CD90 (Thy-1) PerCP-Cyanine5.5

REF **Catalog Number:** 45-0909

Clone: eBio5E10 (5E10)

Concentration: 5 µL (0.125 µg)/test

Host/Isotype: Mouse IgG1, kappa

Formulation: aqueous buffer, 0.09% sodium azide, may contain carrier protein/stabilizer

 **Temperature Limitation:** Store at 2-8°C. Do not freeze. Light sensitive material.

LOT **Batch Code:** Refer to Vial

 **Use By:** Refer to Vial

 **Caution, contains Azide**

Description

The eBio5E10 monoclonal antibody reacts with human CD90, also known as Thy-1 (thymus cell antigen-1). CD90 is a 25-35 kD receptor expressed on thymocytes, CD34+ prothymocytes, hematopoietic stem cells, neurons, a small subset of human fetal liver cells, cord blood cells, and bone marrow cells. CD90 is expressed on a subset of immature, CD34+ cells and a distinct subset of mature CD34- cells that are CD3+CD4+. The CD90+CD34+ population is enriched for cells capable of long-term culture. CD90 is involved in regulation of adhesion and signal transduction by T cells.

Applications Reported

This eBio5E10 (5E10) antibody has been reported for use in flow cytometric analysis.

Applications Tested

This eBio5E10 (5E10) antibody has been pre-titrated and tested by flow cytometric analysis of human erythroleukemia (HEL) cells. This can be used at 5 µL (0.125 µg) per test. A test is defined as the amount (µg) of antibody that will stain a cell sample in a final volume of 100 µL. Cell number should be determined empirically but can range from 10⁵ to 10⁸ cells/test.
