

FITC anti-human CD49e

Catalog # / Size: 328007 / 25 tests
328008 / 100 tests

Clone: NKI-SAM-1

Isotype: Mouse IgG2b, κ

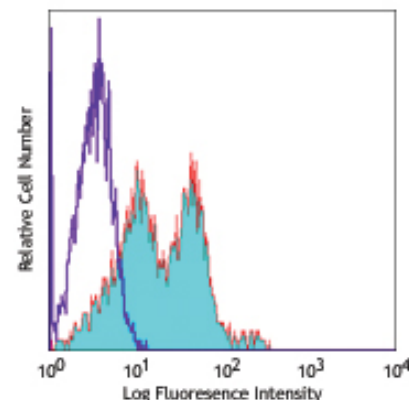

Immunogen: U937 cells

Reactivity: Human, **Cross-Reactivity:** Cynomolgus Macaque

Preparation: The antibody was purified by affinity chromatography, and conjugated with FITC under optimal conditions. The solution is free of unconjugated FITC.

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) BSA (origin USA).

Storage: The antibody solution should be stored undiluted at 4°C and protected from prolonged exposure to light. **Do not freeze.**

Human peripheral blood lymphocytes stained with NKI-SAM-1 FITC

Applications:

Applications: FC - Quality tested

Recommended Usage: Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. **Test size products are transitioning from 20 μ l to 5 μ l per test.** Please check your vial or your CoA to find the suggested use of this reagent per million cells in 100 μ l staining volume or per 100 μ l of whole blood. It is recommended that the reagent be titrated for optimal performance for each application. Read more at www.biolegend.com/testsize regarding the test size change.

Application Notes: Additional reported (for the relevant formats) applications include: immunohistochemical staining of acetone-fixed frozen sections, immunoprecipitation, and inhibition of α 5 integrin mediated cell adhesion. The LEAF™ purified antibody (Endotoxin <0.1 EU/ μ g, Azide-Free, 0.2 μ m filtered) is recommended for functional assays (Cat. No. 328004).

Description: CD49e is a type I integral membrane glycoprotein, known as α 5 integrin, VLA-5 α chain. It forms noncovalent heterodimer with integrin β 1 (CD29). CD49e contains two disulfide-linked subunits of 135 kD and 24 kD, and is mainly expressed on thymocytes, activated lymphocytes, endothelial cells, osteoblasts, melanoma, and some myeloid leukemia cells. CD49e/CD29 complex binds to fibronectin and neural adhesion molecule L1. It mediates monocytes migration, involves in the regulation of cells survival and apoptosis, and co-stimulates T cell activation.
