

Anti-Mouse CD25 PE-Cyanine5.5

Catalog Number: 35-0251

Also known as: Interleukin-2 Receptor alpha

RUO: For Research Use Only. Not for use in diagnostic procedures.

Staining of SJL splenocytes with Anti-Mouse CD4 FITC (cat. 11-0042) and 0.125 ug of Rat IgG1 K Isotype Control PE-Cyanine5.5 (cat. 35-4301) (left) or 0.125 ug of Anti-Mouse CD25 PE-Cyanine5.5 (right). Total viable cells were used for analysis.

Product Information

Contents: Anti-Mouse CD25 PE-Cyanine5.5

Catalog Number: 35-0251

Clone: PC61.5

Concentration: 0.2 mg/mL

Host/Isotype: Rat IgG1, lambda

Formulation: aqueous buffer, 0.09% sodium

azide, may contain carrier protein/stabilizer

Temperature Limitation: Store at 2-8°C. Do not freeze. Light-sensitive material.

Batch Code: Refer to vial

Use By: Refer to vial

Contains sodium azide

Description

The PC61.5 antibody reacts with mouse CD25, the 55 kDa interleukin-2 receptor alpha chain (IL-2R alpha). CD25 is expressed by early progenitors of the T and B lineage as well as by activated mature T and B lymphocytes. By itself, CD25 binds IL-2 only with low affinity. However, CD25 associates with CD122 (IL-2 receptor beta chain) and CD132 (common gamma chain) to form the high affinity IL-2 receptor. Binding of IL-2 to both the high and low affinity classes of IL-2 receptor is inhibited by the PC61.5 antibody. CD25 plays a role in lymphocyte differentiation and activation/proliferation.

Applications Reported

This PC61.5 antibody has been reported for use in flow cytometric analysis.

Applications Tested

This PC61.5 antibody has been tested by flow cytometric analysis of mouse splenocytes. This can be used at less than or equal to 0.25 µg per test. A test is defined as the amount (µg) of antibody that will stain a cell sample in a final volume of 100 µL. Cell number should be determined empirically but can range from 10⁵ to 10⁸ cells/test. It is recommended that the antibody be carefully titrated for optimal performance in the assay of interest.
