Applications Key: W=Western Blotting IHC-P=Immunohistochemistry (Paraffin) F=Flow Cytometry

Reactivity Key: H=Human

Species cross-reactivity is determined by western blot. Species enclosed in parentheses are predicted to react based on 100% sequence homology.

#### **Protocols**

# **Flow Cytometry Protocol**

#### A. Solutions and Reagents

**NOTE:** Prepare solutions with purified water.

- 1. **1X Phosphate Buffered Saline (PBS):** Dissolve 8 g NaCl, 0.2 g KCl, 1.44 g Na<sub>2</sub>HPO<sub>4</sub> and 0.24 g KH<sub>2</sub>PO<sub>4</sub>in 800 ml dH<sub>2</sub>O. Adjust the pH to 7.4 with HCl and the volume to 1 L. Store at room temperature.
- 2. Formaldehyde (methanol free).
- 3. **100% Methanol**
- 4. **Incubation Buffer:** Dissolve 0.5 g bovine serum albumin (BSA) in 100 ml 1X PBS. Store at 4 °C.

#### **B.** Fixation

- 1. Collect cells by centrifugation and aspirate supernatant.
- 2. Resuspend cells briefly in 0.5-1 ml PBS. Add formaldehyde to a final concentration of 2-4% formaldehyde.
- 3. Fix for 10 min at 37 ℃.
- 4. Chill tubes on ice for 1 min.
- 5. For extracellular staining with antibodies that do not require permeabilization, proceed to Section D, Step 1 or store cells in PBS with 0.1% sodium azide at 4 °C; for intracellular staining, proceed to permeabilization (Section C, Step 1).

#### C. Permeabilization

- Permeabilize cells by adding ice-cold 100% methanol slowly to pre-chilled cells, while gently vortexing, to a final
  concentration of 90% methanol. Alternatively, to remove fix prior to permeabilization, pellet cells by centrifugation and
  resuspend in 90% methanol.
- 2. Incubate 30 min on ice.
- 3. Proceed with immunostaining (Section D, Step 1) or store cells at −20 ℃ in 90% methanol.

#### **D.** Immunostaining

**NOTE:** Account for isotype matched controls for monoclonal antibodies or species matched IgG for polyclonal antibodies. Count cells using a hemocytometer or alternative method.

- 1. Aliquot  $0.5-1x10^6$  cells into each assay tube (by volume).
- 2. Add 2–3 ml Incubation Buffer to each tube and rinse by centrifugation. Repeat.
- 3. Resuspend cells in 100  $\,\mu l$  Incubation Buffer per assay tube.
- 4. Block in Incubation Buffer for 10 min at room temperature.

- 5. Add the unconjugated, biotinylated, or fluorochrome-conjugated primary antibody at the appropriate dilution to the assay tubes (see individual antibody datasheet for the appropriate dilution).
- 6. Incubate for 1 hr at room temperature.
- 7. Rinse as before in Incubation Buffer by centrifugation.
- 8. If using a fluorochrome-conjugated primary antibody, resuspend cells in 0.5 ml PBS and analyze on flow cytometer; for unconjugated or biotinylated primary antibodies, proceed to immunostaining (Section D, Step 9).
- Resuspend cells in fluorochrome-conjugated secondary antibody or fluorochrome-conjugated avidin, diluted in Incubation Buffer at the recommended dilution.
- 10. Incubate for 30 min at room temperature.
- 11. Rinse as before in Incubation Buffer by centrifugation.
- 12. Resuspend cells in 0.5 ml PBS and analyze on flow cytometer; alternatively, for DNA staining, proceed to optional DNA stain (Section E, Step 1).

#### E. Optional DNA Stain

- 1. Resuspend cells in 0.5 ml of DNA dye (e.g. Propidium Iodide (PI)/RNase Staining Solution #4087).
- 2. Incubate for at least 5 min at room temperature.
- 3. Analyze cells in DNA stain on flow cytometer.

## Immunohistochemistry Protocol (Paraffin)

 ${\bf *IMPORTANT:} \ See \ product \ data \ sheet \ for \ the \ appropriate \ antibody \ diluent \ and \ antigen \ unmasking \ procedure. \ IHC$ 

Protocol: Unmasking buffer/antibody diluent.

# A. Solutions and Reagents

- 1. Xylene
- 2. Ethanol, anhydrous denatured, histological grade (100% and 95%)
- 3. Deionized water (dH<sub>2</sub>O)
- 4. Hematoxylin (optional)
- Wash Buffer:

1X TBS/0.1% Tween-20 (1X TBST): To prepare 1 L add 100 ml 10X TBS to 900 ml  $dH_2O$ . Add 1 ml Tween-20 and mix.

**10X Tris Buffered Saline (TBS):** To prepare 1 L add 24.2 g Trizma<sup>®</sup> base ( $C_4H_{11}NO_3$ ) and 80 g sodium chloride (NaCl) to 1 L dH<sub>2</sub>O. Adjust pH to 7.6 with concentrated HCl.

- 6. \*Antibody Diluent:
- a. SignalStain® Antibody Diluent #8112
- b. TBST/5% normal goat serum (#5425): To 5 ml 1X TBST add 250 μl normal goat serum.
- c. PBST/5% normal goat serum (#5425): To 5 ml 1X PBST add 250 µl normal goat serum.

 $\textbf{1X PBS/0.1\% Tween-20 (1X PBST):} \ \text{To prepare 1 L add 100 ml 10X PBS to 900 ml } \ dH_2O. \ \text{Add 1 ml Tween-20 and mix.}$ 

 $\textbf{10X Phosphate Buffered Saline (PBS):} \ \text{To prepare 1 L add 80 g sodium chloride (NaCl), 2 g potassium chloride (KCl),} \\$ 

14.4~g sodium phophate, dibasic ( $Na_2HPO_4$ ) and 2.4~g potassium phosphate, monobasic ( $KH_2PO_4$ ) to  $1~L~dH_2O$ . Adjust pH to 7.4.

- 7. \*Antigen Unmasking:
- a. Citrate: 10 mM Sodium Citrate Buffer: To prepare 1 L add 2.94 g sodium citrate trisodium salt dihydrate (C<sub>6</sub>H<sub>5</sub>Na<sub>3</sub>O<sub>7</sub>•2H<sub>2</sub>O) to 1 L dH<sub>2</sub>O. Adjust pH to 6.0.
- b. **EDTA:** 1 mM EDTA: To prepare 1 L add 0.372 g EDTA (C<sub>10</sub>H<sub>14</sub>N<sub>2</sub>O<sub>8</sub>Na<sub>2</sub>•2H<sub>2</sub>O) to 1 L dH<sub>2</sub>O. Adjust pH to 8.0.
- c. **TE:** 10 mM Tris/1 mM EDTA, pH 9.0: To prepare 1L add 1.21 g Trizma® base (C<sub>4</sub>H<sub>11</sub>NO<sub>3</sub>) and 0.372 g EDTA (C<sub>10</sub>H<sub>14</sub>N<sub>2</sub>O<sub>8</sub>Na<sub>2</sub>•2H<sub>2</sub>O) to 950 ml dH<sub>2</sub>O. Adjust pH to 9.0, then adjust final volume to 1000 ml with dH<sub>2</sub>O.
- d. **Pepsin:** 1 mg/ml in Tris-HCl pH 2.0.
- 8. **3% Hydrogen Peroxide:** To prepare, add 10 ml 30% H<sub>2</sub>O<sub>2</sub> to 90 ml dH<sub>2</sub>O.
- 9. Blocking Solution: TBST/5% normal goat serum (#5425): to 5 ml 1X TBST add 250 µl normal goat serum.
- 10. Biotinylated secondary antibody.
- 11. **ABC Reagent:** (Vectastain ABC Kit, Vector Laboratories, Inc., Burlingame, CA) Prepare according to manufacturer's instructions 30 minutes before use.
- 12. **DAB Reagent or suitable substrate:** Prepare according to manufacturer's recommendations.

#### B. Deparaffinization/Rehydration

**NOTE:** Do not allow slides to dry at any time during this procedure.

- 1. Deparaffinize/hydrate sections:
- a. Incubate sections in three washes of xylene for 5 minutes each.
- b. Incubate sections in two washes of 100% ethanol for 10 minutes each.
- c. Incubate sections in two washes of 95% ethanol for 10 minutes each.
- 2. Wash sections twice in dH<sub>2</sub>O for 5 minutes each.

### C. \*Antigen Unmasking

NOTE: Consult product data sheet for specific recommendation for the unmasking solution.

- 1. **For Citrate:** Bring slides to a boil in 10 mM sodium citrate buffer pH 6.0 then maintain at a sub-boiling temperature for 10 minutes. Cool slides on bench top for 30 minutes.
- 2. **For EDTA:** Bring slides to a boil in 1 mM EDTA pH 8.0 followed by 15 minutes at a sub-boiling temperature. No cooling is necessary.
- 3. **For TE:** Bring slides to a boil in 10 mM TE/1 mM EDTA, pH 9.0 then maintain at a sub-boiling temperature for 18 minutes. Cool on the bench for 30 minutes.
- 4. **For Pepsin:** Digest for 10 minutes at 37 ℃.

#### **D. Staining**

- 1. Wash sections in dH<sub>2</sub>O three times for 5 minutes each.
- 2. Incubate sections in 3% hydrogen peroxide for 10 minutes.
- 3. Wash sections in dH<sub>2</sub>O twice for 5 minutes each.

**NOTE:** Consult product data sheet for recommended antibody diluent.

- 4. Wash sections in wash buffer for 5 minutes.
- 5. Block each section with 100-400 µl blocking solution for 1 hour at room temperature.
- Remove blocking solution and add 100-400 μl primary antibody diluted in recommended antibody dilutent to each section.
   Incubate overnight at 4 °C.
- 7. Remove antibody solution and wash sections in wash buffer three times for 5 minutes each.
- Add 100-400 µl biotinylated secondary antibody, diluted in TBST per manufacturer's recommendation, to each section.
   Incubate 30 minutes at room temperature.
- If using ABC avidin/biotin method, prepare ABC reagent according to the manufacturer's instructions and incubate solution for 30 minutes at room temperature.
- 10. Remove secondary antibody solution and wash sections three times with wash buffer for 5 minutes each.
- 11. Add  $100\text{-}400~\mu\text{l}$  ABC reagent to each section and incubate for 30 minutes at room temperature.
- 12. Remove ABC reagent and wash sections three times in wash buffer for 5 minutes each.
- 13. Add 100-400 µl DAB or suitable substrate to each section and monitor staining closely.
- 14. As soon as the sections develop, immerse slides in dH<sub>2</sub>O.
- 15. If desired, counterstain sections in hematoxylin per manufacturer's instructions.
- 16. Wash sections in dH<sub>2</sub>O two times for 5 minutes each.
- 17. Dehydrate sections:
- a. Incubate sections in 95% ethanol two times for 10 seconds each.
- b. Repeat in 100% ethanol, incubating sections two times for 10 seconds each.
- c. Repeat in xylene, incubating sections two times for 10 seconds each.
- 18. Mount coverslips.

# Western Immunoblotting Protocol (Primary Ab Incubation In BSA)

For Western blots, incubate membrane with diluted antibody in 5% w/v BSA, 1X TBS, 0.1% Tween-20 at 4  $^{\circ}$ C with gentle shaking, overnight.

Products available from Cell Signaling Technology are linked by their respective catalog numbers.

#### A. Solutions and Reagents

NOTE: Prepare solutions with Milli-Q or equivalently purified water.

- 1. 1X Phosphate Buffered Saline (PBS).
- 2. **1X SDS Sample Buffer:** (#7722, #7723) 62.5 mM Tris-HCl (pH 6.8 at 25 °C), 2% w/v SDS, 10% glycerol, 50 mM DTT, 0.01% w/v bromophenol blue or phenol red.
- 3. **Transfer Buffer:** 25 mM Tris base, 0.2 M glycine, 20% methanol (pH 8.5).
- 4. **10X Tris Buffered Saline (TBS):** (#9997) To prepare 1 liter of 10X TBS: 24.2 g Tris base, 80 g NaCl; adjust pH to 7.6 with HCl (use at 1X).
- 5. **Nonfat Dry Milk:**  $(\underline{#9999})$  (weight to volume [w/v]).
- 6. **Blocking Buffer:** 1X TBS, 0.1% Tween-20 with 5% w/v nonfat dry milk; for 150 ml, add 15 ml 10X TBS to 135 ml water, mix. Add 7.5 g nonfat dry milk and mix well. While stirring, add 0.15 ml Tween-20 (100%).

- 7. **Wash Buffer:** 1X TBS, 0.1% Tween-20 (TBS/T).
- 8. Bovine Serum Albumin (BSA): (#9998).
- 9. **Primary Antibody Dilution Buffer:** 1X TBS, 0.1% Tween-20 with 5% BSA; for 20 ml, add 2 ml 10X TBS to 18 ml water, mix. Add 1.0 g BSA and mix well. While stirring, add 20 μl Tween-20 (100%).
- 10. Phototope®-HRP Western Blot Detection System: (#7071 anti-rabbit) or (#7072 anti-mouse) Includes biotinylated protein ladder, secondary (#7074 anti-rabbit) or (#7076 anti-mouse) antibody conjugated to horseradish peroxidase (HRP), anti-biotin antibody conjugated to HRP, LumiGLO® chemiluminescent reagent and peroxide.
- 11. Prestained Protein Marker, Broad Range (Premixed Format): (#7720).
- 12. Biotinylated Protein Ladder Detection Pack: (#7727).
- Blotting Membrane: This protocol has been optimized for nitrocellulose membranes, which CST recommends. PVDF
  membranes may also be used.

### **B. Protein Blotting**

A general protocol for sample preparation is described below.

- 1. Treat cells by adding fresh media containing regulator for desired time.
- 2. Aspirate media from cultures; wash cells with 1X PBS; aspirate.
- 3. Lyse cells by adding 1X SDS sample buffer (100 μl per well of 6-well plate or 500 μl per plate of 10 cm diameter plate). Immediately scrape the cells off the plate and transfer the extract to a microcentrifuge tube. Keep on ice.
- Sonicate for 10–15 seconds for complete cell lysis and to shear DNA (to reduce sample viscosity).
- 5. Heat a 20  $\mu l$  sample to 95–100  $\ensuremath{\mathbb{C}}$  for 5 minutes; cool on ice.
- 6. Microcentrifuge for 5 minutes.
- 7. Load 20 μl onto SDS-PAGE gel (10 cm x 10 cm). NOTE: CST recommends loading prestained molecular weight markers (#7720, 10 μl/lane) to verify electrotransfer and biotinylated protein ladder (#7727, 10 μl/lane) to determine molecular weights.
- 8. Electrotransfer to nitrocellulose or PVDF membrane.

# C. Membrane Blocking and Antibody Incubations

**NOTE:** Volumes are for 10 cm x 10 cm (100 cm<sup>2</sup>) of membrane; for different sized membranes, adjust volumes accordingly.

- 1. (Optional) After transfer, wash nitrocellulose membrane with 25 ml TBS for 5 minutes at room temperature.
- 2. Incubate membrane in 25 ml of blocking buffer for 1 hour at room temperature.
- 3. Wash three times for 5 minutes each with 15 ml of TBS/T.
- 4. Incubate membrane and primary antibody (at the appropriate dilution) in 10 ml primary antibody dilution buffer with gentle agitation overnight at 4 °C.
- 5. Wash three times for 5 minutes each with 15 ml of TBS/T.

#### I. For Unconjugated Primary Antibodies

- Incubate membrane with appropriate HRP-conjugated secondary antibody (1:2000) and HRP-conjugated anti-biotin
  antibody (1:1000) to detect biotinylated protein markers in 10 ml of blocking buffer with gentle agitation for 1 hour at
  room temperature.
- 2. Wash three times for 5 minutes each with 15 ml of TBS/T.

#### II. For HRP Conjugated Primary Antibodies

Skip to Detection of Proteins (Step D).

#### III. For Biotinylated Primary Antibodies

- Incubate membrane with HRP-Streptavidin (at the appropriate dilution) in milk for one hour with gentle agitation at room temperature.
- 2. Wash three times for 5 minutes each with 15 ml of TBS/T.

#### **D.** Detection of Proteins

- Incubate membrane with 10 ml LumiGLO® (0.5 ml 20X LumiGLO®, 0.5 ml 20X Peroxide and 9.0 ml Milli-Q water) with gentle agitation for 1 minute at room temperature. NOTE: LumiGLO® substrate can be further diluted if signal response is too fast.
- 2. Drain membrane of excess developing solution (do not let dry), wrap in plastic wrap and expose to x-ray film. An initial 10-second exposure should indicate the proper exposure time. **NOTE:** Due to the kinetics of the detection reaction, signal is most intense immediately following LumiGLO® incubation and declines over the following 2 hours.

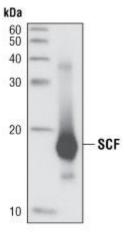

# **Specificity / Sensitivity**

SCF (C19H6) Rabbit mAb detects endogenous levels of SCF by immunohistochemical staining and by flow cytometry. Western blotting detects recombinant SCF.

#### **Source / Purification**

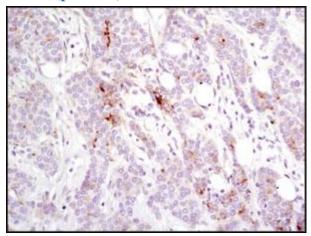

Monoclonal antibody is produced by immunizing animals with a synthetic peptide corresponding to amino acids in the N-terminal sequence of human SCF.

# **Western Blotting**

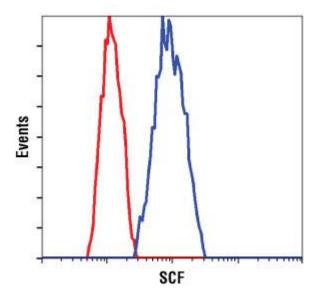

Western blot analysis of recombinant SCF (5 ng) using SCF (C19H6) Rabbit mAb.

# IHC-P (paraffin)

Immunohistochemical analysis of paraffin-embedded human breast carcinoma using SCF (C19H6) RmAb.

# **Flow Cytometry**

Flow cytometric analysis of U-87 MG cells using SCF (C19H6) Rabbit mAb (blue) compared to a nonspecific negative control antibody (red).
