

Product Data Sheet

Alexa Fluor® 647 anti-human CD160

Catalog # / Size:	341203 / 25 tests 341204 / 100 tests				
Clone:	/55				
Isotype:	Mouse IgM, κ	6	S - Carrier and a star starting		
Reactivity:	Human				
Preparation:	The antibody was purified by affinity chromatography, and Alexa Fluor® 647 under optimal conditions. The solution is unconjugated Alexa Fluor® 647.	conjugated with free of	BY55 Alexa Fluore		
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% soc 0.2% (w/v) BSA (origin USA).	lium azide and			
Storage:	The antibody solution should be stored undiluted at 4°C an prolonged exposure to light. Do not freeze.	d protected from			
Annlingtion	<u></u>		CD8 (RPA-T8) PerCP/Cy5.5		
Application).		Human peripheral blood lymphocytes stained with BY55 Alexa Fluor® 647		
Applications:	FC - Quality tested		and CD8 (RPA-T8) PerCP/Cy5.5		
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For immunofluorescent staining, the suggested use of this reagent is 5 µl per million cells or 5 µl per 100 µl of whole blood. It is recommended that the reagent be titrated for optimal performance for each application. * Alexa Fluor® 647 has a maximum emission of 668 nm when it is excited at 633nm / 635nm. ** Alexa Fluor® is a registered trademark of Molecular Probes, Inc. Alexa Fluor® dye antibody conjugates are sold under license from Molecular Probes, Inc. for research use only, except for use in combination with microarrays and high content screening, and are covered by pending and issued patents.

Description:	CD160 is a 27 kD GPI-anchored glycoprotein also known as BY55, NK1, and NK28. A member the Ig superfamily, CD160 exists as a disulfide-bond multimer, expressed on the surface of a subpopulation of NK cells, γ/δ T cells, subset of CD8+ T cells, and intestinal intraepithelial lymphocytes (IEL). CD160 plays costimulatory roles through binding to classical and nonclassical MHC-I molecules.
