Description

Mouse IL-4, also known as BCDF, BCGF-1 and BSF-1, is secreted by activated Th2 and natural killer T cells, and to a lesser extent by Th1 and mast cells. IL-4 is species-specific and promotes proliferation and differentiation of B cells. IL-4, in conjunction with other signals such as CD40, induces Ig isotype switching of B cells and the upregulation of surface MHC class II and CD23.

Applications Reported

Recombinant mouse IL-4 is biologically active and can promote proliferation of mouse T lymphocytes in culture.

Applications Tested

The ED50 of this protein, as measured by CTLL-2 proliferation assay, is less than or equal to 1250 pg/mL. This corresponds to a specific activity of greater than or equal to 8 x 10⁵ Units/mg.
