

## **Product Data Sheet**

## APC anti-human TCR $\alpha$ / $\beta$

Catalog # / Size: 306717 / 25 tests

306718 / 100 tests

Clone: IP26

**Isotype:** Mouse IgG1, κ

Reactivity: Human

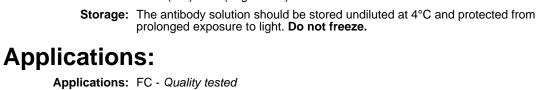

**Preparation:** The antibody was purified by affinity chromatography and conjugated with

APC under optimal conditions. The solution is free of unconjugated APC and

unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and

0.2% (w/v) BSA (origin USA).

Recommended Usage: Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. Test size products are transitioning from 20 μl to 5 μl per test. Please check your vial or your CoA to find the suggested use of this reagent per million cells in 100 μl staining volume or per 100 μl of whole blood. It is recommended that the reagent be titrated for

optimal performance for each application. Read more at www.biolegend.com/testsize regarding the test size change.

Application Notes: Additional reported applications (for the relevant formats) include: T cell activation. When co-staining with anti-CD3,

we recommend using clone UCHT1, since we have confirmed that IP26 does not compete with this clone. Other

anti-CD3 clones may compete out the binding of IP26.

**Description:** The IP26 antibody reacts with a monomorphic determinant of the  $\alpha/\beta$  T-cell receptor, which is expressed on greater

than 95% of normal peripheral blood CD3+ T cells. The α/β TCR recognizes a peptide bound to MHC leading to T-cell

Clone

MOPC-21

activation.
