Technical Data Sheet

PE Mouse anti-WIP (pS488)

Product Information

Material Number: 558673

Alternate Name: PRPL-2 protein, WAIP, WASIP, WASPIP

50 Tests Size Vol. per Test: 20 ul K32-824 Clone:

Phosphorylated Human WIP Peptide Immunogen:

Isotype: Mouse IgG1, κ Reactivity: QC Testing: Human

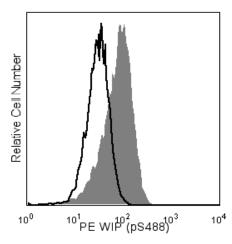

Predicted Reactivity: Mouse, Rat

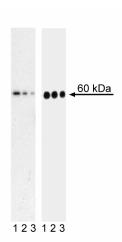

Storage Buffer: Aqueous buffered solution containing BSA and ≤0.09% sodium azide.

Description

Wiskott-Adrich syndrome protein (WASP)-Interacting Protein (WIP) is a member of the verprolin family of proteins that regulate cytoskeletal organization in a wide variety of cellular activities, including endocytosis, cellular adhesion and migration, mast cell degranulation, and lymphocyte activation. The 503-amino acid WIP protein contains binding sites for actin (globular and filamentous) and other proteins that are involved in the regulation of actin polymerization, such as WASP, N-WASP, profilin, cortactin, Hck, and NCK. As its functions imply, WIP is localized in actin-rich cell structures.

The K32-824 monoclonal antibody recognizes the phosphorylated serine 488 (pS488) of human WIP. The orthologous phosphorylation sites in mouse and rat WIP are S478 and S472, respectively

Analysis of WIP (pS488) in human T leukemia cells.

LEFT: The shaded histogram displays Jurkat cells (ATCC TIB152) that were stimulated by cross-linking of CD3 and CD28 with NA/LE Mouse anti-Human CD3 mAb UCHT1 (Cat. No. 555329) and NA/LE Mouse anti-Human CD28 mAb CD28.2 (Cat. No. 555725) on ice for 15 minutes followed by Purified Goat anti-Mouse Ig (Cat. No. 553998) on ice for 15 minutes, and then allowed to undergo phosphorylation at 37°C for 3 minutes. The open histogram shows unstimulated Jurkat cells. The cells were fixed (BD Cytofix™ buffer, Cat. No. 554655) for 10 minutes at 37 °C, permeabilized (BD Phosflow™ Perm Buffer III, Cat. No. 558050) on ice for at least 30 minutes, blocked with normal mouse immunoglobulin, and then stained with Alexa Fluor® 647 Mouse anti-WIP (pS488). Flow cytometry was performed on a BD FACSArray™ bioanalyzer system. RIGHT: The specificity of mAb K32-824 was confirmed by western blot using unconjugated antibody on lysates from control (left panel) and CD3/CD28-cross-linked (right panel) Jurkat cells. WIP (pS488) is upregulated in the treated cells; its observed

Preparation and Storage

Store undiluted at 4°C and protected from prolonged exposure to light. Do not freeze.

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography.

molecular weight is ~60 kDa, although the calculated molecular weight is 51 kDa.

The antibody was conjugated with R-PE under optimum conditions, and unconjugated antibody and free PE were removed.

Application Notes

Application

Intracellular staining (flow cytometry)	Routinely Tested	

Suggested Companion Products

Catalog Number	Name	Size	Clone	
558050	Perm Buffer III	125 mL	(none)	
554655	Fixation Buffer	100 mL	(none)	
554656	Stain Buffer (FBS)	500 mL	(none)	

Product Notices

- This reagent has been pre-diluted for use at the recommended Volume per Test. We typically use 1 × 10⁶ cells in a 100-μl experimental sample (a test).
- Please refer to www.bdbiosciences.com/pharmingen/protocols for technical protocols. 2.
- For fluorochrome spectra and suitable instrument settings, please refer to our Multicolor Flow Cytometry web page at www.bdbiosciences.com/colors.
- Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
- Source of all serum proteins is from USDA inspected abattoirs located in the United States.
