

## Technical Data Sheet

**Purified Mouse Anti-PKCβ****Product Information**

<b>Material Number:</b>	<b>610127</b>
<b>Size:</b>	50 µg
<b>Concentration:</b>	250 µg/ml
<b>Clone:</b>	36/PKCβ
<b>Immunogen:</b>	Human PKCβ aa. 126-324
<b>Isotype:</b>	Mouse IgG2a
<b>Reactivity:</b>	QC Testing: Rat Tested in Development: Human, Mouse, Chicken
<b>Target MW:</b>	80kDa
<b>Storage Buffer:</b>	Aqueous buffered solution containing BSA, glycerol, and ≤0.09% sodium azide.

**Description**

The Protein Kinase C (PKC) family of homologous serine/threonine protein kinases is involved in a number of processes such as growth, differentiation, and cytokine secretion. At least eleven isozymes have been described. These proteins are products of multiple genes and alternative splicing. PKC consists of a single polypeptide chain containing four conserved regions (C) and five variable regions (V). The N-terminal half containing C1, C2, V1, and V2 constitutes the regulatory domain and interacts with the PKC activators Ca<sup>2+</sup>, phospholipid, diacylglycerol, or phorbol ester. However, the novel PKC (nPKC) subfamily members (δ, ε, η, and θ isoforms) and the atypical PKC (aPKC) subfamily members (ζ, ι, and λ isoforms) are Ca<sup>2+</sup> independent and lack the C2 domain. The aPKC members are unique in that their activity is independent of diacylglycerols and phorbol esters. They also lack one repeat of the cysteine-rich sequences that are conserved in cPKC and nPKC. The C-terminal region of PKC contains the catalytic domain. The PKC pathway represents a major signal transduction system that is activated following ligand-stimulation of transmembrane receptors by hormones, neurotransmitters and growth factors. PKCβ is highly expressed in brain and hematopoietic cells. Autophosphorylation of PKCβ occurs at the N- and C-terminal regions, as well as within the hinge region. However, only the COOH-terminal autophosphorylation sites are essential for PKCβ's function and subcellular localization. PKCβ is critical for the proliferation of K562 cells, as well as being an important regulator of human melanogenesis.

**Western blot analysis of PKCβ on rat brain lysate.** Lane 1: 1:250, lane 2: 1:500, lane 3: 1:1000 dilution of anti-PKCβ antibody.

**Preparation and Storage**

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography. Store undiluted at -20° C.

## Application Notes

### Application

Western blot	Routinely Tested
Immunoprecipitation	Tested During Development
Immunofluorescence	Not Recommended
Immunohistochemistry	Not Recommended

### Recommended Assay Procedure:

Western blot: Please refer to [http://www.bdbiosciences.com/pharming/en/protocols/Western\\_Blotting.shtml](http://www.bdbiosciences.com/pharming/en/protocols/Western_Blotting.shtml).

## Suggested Companion Products

Catalog Number	Name	Size	Clone
611463	Rat Cerebrum Lysate	500 µg	(none)
554002	HRP Goat Anti-Mouse Ig	1.0 ml	(none)

## Product Notices

1. Since applications vary, each investigator should titrate the reagent to obtain optimal results.
2. Please refer to [www.bdbiosciences.com/pharming/en/protocols](http://www.bdbiosciences.com/pharming/en/protocols) for technical protocols.
3. Source of all serum proteins is from USDA inspected abattoirs located in the United States.
4. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
