# Technical Data Sheet Purified Mouse Anti-Human Eg5

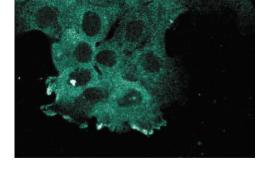

| Product Information |   |  |  |
|---------------------|---|--|--|
| Material Number:    | 611186  |  |  |
| Size:               | 50 µg   |  |  |
| Concentration:      | 250 µg/ml   |  |  |
| Clone:              | 20/EG5  |  |  |
| Immunogen:          | Human Eg5 aa. 324-532   |  |  |
| Isotype:            | Mouse IgG1  |  |  |
| Reactivity:         | QC Testing: Human   |  |  |
| Target MW:          | 120 kDa   |  |  |
| Storage Buffer:     | Aqueous buffered solution containing BSA, glycerol, and $\leq 0.09\%$ sodium azide. |  |  |

#### Description

The mitotic spindle apparatus equally distributes duplicated chromosomes to daughter cells. This process is mediated by the dynamic instability of the spindle microtubules and the forces generated by the action of cytoplasmic dynein and kinesin-related motor proteins (KRPs), such as CHO1/MKLP1. These motors hydrolyze ATP as they move progressively along the microtubules. They organize the microtubules into bipolar spindles and may also serve as bridges between microtubules and chromosome kinetochores or centrosomes. Eg5, identified in Xenopus laevis, is a plus-end directed KRP, associated with the mitotic spindle. Vertebrate Eg5 is a member of the KRP subfamily bimC. These family members share a high degree of sequence homology (>80% within the N-terminal motor domain) and may execute similiar functions. During mitosis, Eg5 is specifically phosphorylated at Thr-297, an evolutionarily conserved cdc2 phosphorylation site, by p34[cdc2]/cyclin B. Inhibition of phosphorylation blocks the interaction of Eg5 with centrosomes. Thus, Eg5 is a mitotic motor protein that regulates spindle formation in a phosphorylation-dependent manner.

This antibody is routinely tested by western blot analysis. Other applications were tested at BD Biosciences Pharmingen during antibody development only or reported in the literature.

Western blot analysis of Eg5 on a human endothelial cell lysate. Lane 1: 1:1000, lane 2: 1:2000, lane 3: 1:4000

Immunofluorescence staining of A431 cells.

# Preparation and Storage

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography. Store undiluted at -20° C.

| 611450         | Human Endothelial Cell Lysate | 500 μg | (none)     |
| 554002         | HRP Goat Anti-Mouse Igs       | 1.0 ml | (none)     |
| 554001         | FITC Goat Anti-Mouse Igs      | 0.5 mg | Polyclonal |

### **Product Notices**

- 1. Since applications vary, each investigator should titrate the reagent to obtain optimal results.
- 2. Please refer to www.bdbiosciences.com/pharmingen/protocols for technical protocols.
- 3. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
- 4. Source of all serum proteins is from USDA inspected abattoirs located in the United States.
