Product Description

Tuberin (TSC2) is a putative tumor suppressor which acts to stimulate specific GTPases such as the small GTPase RHEB, and the Ras-related proteins RAP1A and RAB5. Tuberin is part of the mTORC1 signaling pathway, and is involved in microtubule-mediated protein transport, and regulation of cell size in response to nutrient levels. Alternative splicing results in variants that encode different isoforms of the protein.

This antibody was developed against a fully folded protein domain, so it does not show good reactivity against denatured proteins, and may not work in western blot applications.
