

## Lectin HPA Conjugates

**Table 1.** Contents and Storage Information.

Material	Amount	Concentration	Storage	Stability
Lectin HPA Alexa Fluor® 488 conjugate	1 mg	See Table 2	≤-20°C Desiccate Protect from light	1 year
<b>Approximate Fluorescence Excitation and Emission, in nm: ~495/519 nm</b>				

### Introduction

Lectins are oligomeric proteins with saccharide-binding sites that can recognize and bind particular glycoconjugates. The lectin *Helix pomatia* agglutinin (HPA), which is isolated from the edible snail *Helix pomatia*, selectively binds to  $\alpha$ -*N*-acetyl-galactosamine residues and type A erythrocytes. This lectin exists as a hexamer with a molecular weight of approximately 70,000 daltons.<sup>1</sup>

Fluorescent lectins are versatile probes with diverse applications, including detection of cell surface and intracellular glycoconjugates by microscopy<sup>2</sup> and flow cytometry,<sup>3,4</sup> localization of glycoproteins in gels,<sup>5</sup> precipitation of glycoproteins in solution, and agglutination of specific cell types.<sup>1</sup> Molecular Probes offers an Alexa Fluor® 488 dye conjugate of lectin HPA.

### Guidelines for Use

#### Preparing Lectin HPA Conjugates

A 1 mg/mL solution can be prepared by dissolving the contents of one vial in 1.0 mL of phosphate-buffered saline (PBS). Solutions can be stored at 2–6°C for approximately three months. For longer storage, divide the solutions into aliquots and freeze at ≤-20°C. PROTECT FROM LIGHT. AVOID REPEATED FREEZING AND THAWING OF SOLUTIONS.

#### Using Conjugate Solutions

It is a good practice to centrifuge the protein conjugate solution briefly in a microcentrifuge before use; only the supernatant should then be added to the experiment. This step will eliminate any protein aggregates that may have formed during storage, thereby reducing nonspecific background staining.

Due to the diversity of potential applications, please consult the literature for an appropriate working concentration. The concentrations in Table 2 are recommended starting ranges for some of the more common applications. However, because staining conditions will vary with the application, optimal concentrations should be determined empirically.

**Table 2.** Recommended fluorescent lectin concentrations for various applications.

Application	Working Concentration
Staining glycoproteins in gels 4	1–10 mg/mL
Staining intracellular and cell surface glycoconjugates 5,6	5–50 µg/mL
Agglutinating cells 6	10–250 µg/mL

## Product List Current prices may be obtained from our Web site or from our Customer Service Department.

Cat #	Product Name	Unit Size
L11271	lectin HPA from <i>Helix pomatia</i> (edible snail), Alexa Fluor® 488 conjugate .....	1 mg

## Contact Information

**Molecular Probes, Inc.**  
29851 Willow Creek Road  
Eugene, OR 97402  
Phone: (541) 465-8300  
Fax: (541) 335-0504

**Customer Service:**  
6:00 am to 4:30 pm (Pacific Time)  
Phone: (541) 335-0338  
Fax: (541) 335-0305

Further information on Molecular Probes products, including product bibliographies, is available from your local distributor or directly from Molecular Probes. Customers in Europe, Africa and the Middle East should contact our office in Paisley, United Kingdom. All others should contact our Technical Assistance Department in Eugene, Oregon.

Molecular Probes products are high-quality reagents and materials intended for research purposes only. These products must be used by, or directly under the supervision of, a technically qualified individual experienced in handling potentially hazardous chemicals. Please read the Material Safety Data Sheet provided for each product; other regulatory considerations may apply.

### Limited Use Label License

For research use only. Not intended for any animal or human therapeutic or diagnostic use. The purchase of this product conveys to the buyer the non-transferable right to use the purchased amount of the product and components of the product in research conducted by the buyer (whether the buyer is an academic or for-profit entity). The buyer cannot sell or otherwise transfer (a) this product (b) its components or (c) materials made using this product or its components to a third party or otherwise use this product or its components or materials made using this product or its components for Commercial Purposes. The buyer may transfer information or materials made through the use of this product to a scientific collaborator, provided that such transfer is not for any Commercial Purpose, and that such collaborator agrees in writing (a) to not transfer such materials to any third party, and (b) to use such transferred materials and/or information solely for research and not for Commercial Purposes. Commercial Purposes means any activity by a party for consideration and may include, but is not limited to: (1) use of the product or its components in manufacturing; (2) use of the product or its components to provide a service, information, or data; (3) use of the product or its components for therapeutic, diagnostic or prophylactic purposes; or (4) resale of the product or its components, whether or not such product or its components are resold for use in research. Invitrogen Corporation will not assert a claim against the buyer of infringement of the above patents based upon the manufacture, use or sale of a therapeutic, clinical diagnostic, vaccine or prophylactic product developed in research by the buyer in which this product or its components was employed, provided that neither this product nor any of its components was used in the manufacture of such product. If the purchaser is not willing to accept the limitations of this limited use statement, Invitrogen is willing to accept return of the product with a full refund. For information on purchasing a license to this product for purposes other than research, contact Molecular Probes, Inc., Business Development, 29851 Willow Creek Road, Eugene, OR 97402. Tel: (541) 465-8300. Fax: (541) 335-0504.
