

Product panHPV BIO DNA probe
Cat.no. PLB000

Biotinylated DNA Probe for pan Human Papillomavirus

patents pending

Technical specifications

- Quantity : 0.8 ml probe solution and 15 ml PanWash for 25 assays.
Format : the probe is supplied in a ready-to-use form optimally diluted in hybridization mixture.
Application : for the colorimetric detection of HPV in paraffin sections, frozen sections and cytological specimen using the DNA *in situ* hybridization technique.
Recommended use : **USE ONLY IN COMBINATION WITH MATCHING PANWASH!**
Allow both reagents to warm up to room temperature (20-30°C) before starting. Dehydrate digested specimens in graded ethanol and air-dry. Apply one drop of probe solution per specimen and cover with a coverslip. Place the slides on a 95°C hotplate and incubate for 5 min. Incubate the slides for 2 hrs at 37°C. Gently remove coverslips by soaking slides in TBS buffer for 10 min. Apply 5-6 drops of PanWash (product code: BC0013) to each specimen and incubate for 15 min. on a 37°C heating block. Wash the slides for 3 x 1 min. in TBS buffer and start detection procedure.
Size of probe : 100-300 bp determined by agarose gel electrophoresis.
Region : mix of total genomes (7 Kb - 8 Kb) and DNA containing the conserved HPV region (200 bp).
Vector : mix of pBR322 and pSP.
Purification : performed by size exclusion chromatography.
Detection limit : at least 3-10 pg by filter hybridization using PanPath's biotin detection system (product code: DSB18).
Storage : store refrigerated at 2-6°C.
Stability : at least stable until expiry date printed on label.
Precautions : - homogenize probe solution before usage.
- avoid contact with eyes and skin.
