Catalog # CMC0053

(Page 1 of 2) DCC-09-0263

Lot #*: 544808

*Note: A letter at the end of the lot number signifies an additional packaging of this same lot.

*No	ote: A letter at the end of the	lot number signifies an additional packaging of this same lot.
1.	Coating Antibody: Part Number: Lot Number: Form: Storage: Recommended Dilution:	Rat Anti-Ms IL-5 (0.125mg/0.125mL) AMC0054D 544814 Liquid, 1 vial, contains 0.1% sodium azide Store at 2-8°C for 1 month. For longer periods, aliquot and store at ≤ -20 °C. Dilute to 1.25 µg/mL with Coating Buffer B (Cat. # CB01100, or see Recommended Buffers). For example, to make 10 mL (enough to coat 1 plate), add 12.5 µL coating antibody to 9.988 mL Coating Buffer B.
2.	Detection Antibody: Part Number: Lot Number: Form: Storage: Recommended Dilution:	Rat Anti-Ms IL-5 Biotin (0.025mg/0.125mL) AMC0959D 544812 Liquid, 1 vial, contains 0.1% sodium azide Store at 2-8°C for 1 month. For longer periods, aliquot and store at ≤ -20 °C. Dilute to 0.1 µg/mL with Assay Buffer supplemented with 5% calf serum (Cat. # DS98200, or see Recommended Buffers). For example, to make enough for 1 plate, add 5.0 µL detection antibody to 9.995 mL Assay Buffer.
3.	Standard: Part Number: Lot Number: Form: Storage: Concentration of Reconstituted Standard: Reconstitution:	 Recombinant Ms IL-5 SD076 (inquire regarding additional vials) 1387663 Lyophilized, 3 vials (single use) Store at 2-8°C. 10,000 pg/mL. Reconstitute in Assay Buffer (Cat. # DS98200 or see Recommended Buffers) according to instructions on vial label. Allow standard to rehydrate for approximately 10 minutes before dilutions. If the standard stock is not being used immediately, please aliquot into polypropylene tubes and freeze at -80°C. <i>Do not store at room temperature or at 4°C for any extended time or subject to more than one freeze-thaw cycle.</i> Dilute standard stock to 1000 pg/mL (a 1:10 dilution) followed by six 1:2 serial dilutions using at least 300 μL of
	Standard Curve:	buffer. Mix thoroughly between dilutions. Avoid foaming. To an empty tube add 300 μ L of buffer and label as zero standard.
4.	Streptavidin-HRP: Part Number: Lot Number: Form: Storage: Recommended Dilution:	0.025 mg/0.125 mL SNN4004Y 549199 Liquid, 1 vial, contains animal serum and 50% glycerol in phosphate buffered saline with 0.05% thymol as a preservative. Store concentrate at 2-8°C for 1 month. For longer periods, aliquot and store at ≤ -20 °C. Diluted streptavidin-HRP should not be stored; discard remaining solution after use. Dilute to 0.75 µg/mL. For example, to make enough for 1 plate, add 3.75 µL of streptavidin-HRP to 9.996 mL of
	Recommended Difution.	 Following the recommended assay procedure using the Invitrogen CytoSet[™] Buffer Set (Cat. # CNB0011), the representative standard curve was generated.
		Mouse IL-5 CytoSet

Important Licensing Information - These products may be covered by one or more Limited Use Label Licenses (see the Invitrogen Catalog or our website, <u>www.invitrogen.com</u>). By use of these products you accept the terms and conditions of all applicable Limited Use Label Licenses. Unless otherwise indicated, these products are for research use only and are not intended for human or animal diagnostic, therapeutic or commercial use.

Intended Use and Materials Provided

The CytoSetTM for Mouse IL-5 contains components required to construct an enzyme-linked immunoassay for the specific and quantitative measurement of IL-5. Sufficient quantities of all reagents are provided to yield 10 plates of 96 wells if the recommended assay procedure and recommended storage and handling of materials are followed as specified on this insert. The materials provided are **FOR RESEARCH USE ONLY**.

Recommended Buffers and Solutions

The Invitrogen CytoSetTM Buffer Set (Cat. # CNB0011) containing Coating Buffers A and B, Assay Buffer, Substrate Solution (TMB), Stop Solution, and Wash Buffer is recommended.

1.	Coating Buffer A:	Coating Buffer A (Cat. # CB07100) from Invitrogen is recommended. Alternate buffer choice listed below.
		8.0 g NaCl , $1.13 \text{ g Na}_2\text{HPO}_4$, $0.2 \text{ g KH}_2\text{PO}_4$, 0.2 g KCl ; q.s. to 1.0 L with distilled H ₂ O, pH to 7.4.
2.	Coating Buffer B:	Coating Buffer B (Cat. # CB01100) from Invitrogen is recommended. Alternate buffer choice listed below.
	_	4.3 g NaHCO ₃ , 5.3 g Na ₂ CO ₃ , q.s. to 1.0 L with distilled H_2O , pH to 9.4.
3.	Assay Buffer:	Assay Buffer (Cat. # DS98200) from Invitrogen is recommended. Alternate buffer choice listed below.
		8.0 g NaCl, 1.13 g Na ₂ HPO ₄ , 0.2 g KH ₂ PO ₄ , 0.2 g KCl, 5.0 g bovine serum albumin (fraction V), 1 mL Tween 20;
		q.s. to 1.0 L with distilled H ₂ O, pH to 7.4.
4.	Wash Buffer:	Wash Buffer (Cat. # WB01) from Invitrogen is recommended. Alternate buffer choice listed below.
		9.0 g NaCl, 1 mL Tween 20; q.s. to 1.0 L with distilled H_2O , pH to 7.4.
5.	Substrate Solution:	TMB (Cat. # SB01) from Invitrogen is recommended. Alternate solution choice listed below.
		Tetramethylbenzidine (TMB) and Hydrogen Peroxide.
6.	Stop Solution:	Stop Solution (Cat.# SS01100) from Invitrogen is recommended. Alternate solution choice listed below.
	-	$1.8 \text{ N H}_2 \text{SO}_4.$

Assay Optimization

CytoSetsTM from Invitrogen are designed to be very flexible for your experiments. Consequently, the assay procedure contains only recommendations. The assay procedure has been optimized for use with tissue culture samples. However, serum and plasma samples may be used but may require that certain assay parameters be modified. Investigators are advised to determine optimal buffer formulations, concentrations and incubation times for individual applications.

Recommended Assay Procedure

- 1. Prepare coating solution by diluting the coating antibody. See "coating antibody" section for the recommended coating antibody dilution.
- 2. Coat plates with 100 µL per well of the coating solution. Cover plates and incubate overnight (12-18 hr.) at 4°C.
- Aspirate wells and wash 1 time with > 400 μL of Wash Buffer per well. Following wash, invert and tap on absorbent paper to remove excess liquid.
- 4. Block plate with $300 \ \mu L$ per well of Assay Buffer for 1 hour at room temperature.
- 5. Aspirate, invert, and tap on absorbent paper to remove excess liquid.
- 6. Prepare standards and sample dilutions in Assay Buffer (or in a diluent that most closely matches the matrix of your sample).
- 7. Pipette 100 μL of standards (in duplicate), samples and controls into designated wells. *Cover plate and incubate for 1 hour and 30 minutes at room temperature.*
- 8. Aspirate and wash 5 times using the method in step 3.
- 9. Pipette 100 µL of the working detection antibody into each well. Cover plate and incubate for 1 hour at room temperature.
- 10. Aspirate and wash 5 times using the method in step 3.
- 11. Add 100 µL of the working streptavidin-HRP solution into each well. Cover plate and incubate for 45 minutes at room temperature.
- 12. Aspirate and wash 5 times using the method in step 3.
- 13. Add 100 µL of the TMB substrate to each well. Incubate plate without a plate cover for 30 minutes in the dark at room temperature.
- 14. Add 100 μ L of Stop Solution to each well.
- 15. Measure absorbance at 450 nm (reference absorbance: 650 nm) within 30 minutes of adding Stop Solution. Calculate results using a log-log or 4-parameter curve fit.

Additional Materials Required

- 96 well NUNC MaxiSorp microplates; NUNC Cat. # 434797.
- Pipettes; plate covers or plate sealers and timer.
- Microplate reader with a detector that can measure absorbance at 450 nm.
- 1 L graduated cylinder; plate washer or wash bottle.
- Polypropylene tubes for standards and sample dilutions, if needed.

This product is for research use only. Not for use in diagnostic procedures.
