

CD3 antibodies, non-human primate

For research use only

One test corresponds to labeling of up to 10^6 cells in a total volume of 100 μ L

Product	Content	Order no.
CD3-Biotin	for 30 tests	130-116-745
CD3-FITC	for 30 tests	130-116-746
CD3-FITC	for 100 tests	130-116-625
CD3-PE	for 30 tests	130-116-747
CD3-PE	for 100 tests	130-116-626
CD3-APC	for 30 tests	130-116-748
CD3-APC	for 100 tests	130-116-627
CD3-VioBlue	for 30 tests	130-116-753
CD3-VioBlue	for 100 tests	130-116-632
CD3-VioGreen	for 30 tests	130-116-754
CD3-VioGreen	for 100 tests	130-116-633
CD3-PE-Vio615	for 30 tests	130-116-755
CD3-PE-Vio615	for 100 tests	130-116-634
CD3-PE-Vio770	for 30 tests	130-116-749
CD3-PE-Vio770	for 100 tests	130-116-628
CD3-APC-Vio770	for 100 tests	130-116-629
CD3-PerCP-Vio700	for 30 tests	130-116-751
CD3-PerCP-Vio700	for 100 tests	130-116-630
CD3-VioBright 515	for 30 tests	130-116-752
CD3-VioBright 515	for 100 tests	130-116-631
CD3-Biotin	for 100 tests	130-116-624

Warnings

Reagents contain sodium azide. Under acidic conditions sodium azide yields hydrazoic acid, which is extremely toxic. Azide compounds should be diluted with running water before discarding. These precautions are recommended to avoid deposits in plumbing where explosive conditions may develop.

Technical data and background information

Antigen	CD3
Clone	REA994
Isotype	recombinant human IgG1
Isotype control	REA Control (S) antibodies

Alternative names of antigen	T3
Entrez Gene ID	699582 , 705270 , 697814 , 699467
Cross-reactivity	pigtail monkey (<i>Macaca nemestrina</i>), olive baboon (<i>Papio anubis</i>), african green monkey (<i>Chlorocebus aethiops</i>)
Distribution of antigen	T cells, NKT cells, NK cells
Product format	Reagents are supplied in buffer containing stabilizer and 0.05% sodium azide.
Fixation	Cells should be stained prior to fixation, if formaldehyde is used as a fixative.
Storage	Store protected from light at 2–8 °C. Do not freeze.

Clone REA994 recognizes rhesus monkey (*Macaca mulatta*) and cynomolgus monkey (*Macaca fascicularis*) CD3 T cells. The antibody has been reported to be cross-reactive with pigtail monkey (*Macaca nemestrina*), olive baboon monkey (*Papio anubis*), and african green monkey (*Chlorocebus aethiops*) T cells. CD3 is expressed on all T cells and on a subset of NK cells. It is associated with the T cell receptor (TCR) and is responsible for its signal transduction. Additional information: Clone REA994 displays negligible binding to Fc receptors.

Reagent requirements

- Buffer: Prepare a solution containing phosphate-buffered saline (PBS), pH 7.2, 0.5% bovine serum albumin (BSA), and 2 mM EDTA by diluting MACS[®] BSA Stock Solution (# 130-091-376) 1:20 with autoMACS[®] Rinsing Solution (# 130-091-222). Keep buffer cold (2–8 °C).
Note: EDTA can be replaced by other supplements such as anticoagulant citrate dextrose formula-A (ACD-A) or citrate phosphate dextrose (CPD). Buffers or media containing Ca²⁺ or Mg²⁺ are not recommended for use.
- (Optional) Fluorochrome-conjugated anti-biotin antibodies, e.g., Anti-Biotin-PE (# 130-090-756) as secondary antibody reagent in combination with biotinylated antibodies.
- (Optional) Propidium Iodide Solution (# 130-093-233) for flow cytometric exclusion of dead cells without fixation.
- (Optional) Fixation and Dead Cell Discrimination Kit (# 130-091-163) for cell fixation and flow cytometric exclusion of dead cells.

Protocol for cell surface staining

- The recommended antibody dilution for labeling of cells and subsequent analysis by flow cytometry is 1:50 for up to 10⁶ cells/100 µL.
 - Volumes given below are for up to 10⁶ nucleated cells. When working with fewer than 10⁶ cells, use the same volumes as indicated. When working with higher cell numbers, scale up all reagent volumes and total volumes accordingly.
1. Determine cell number.
 2. Centrifuge cell suspension at 300×g for 10 minutes. Aspirate supernatant completely.
 3. Resuspend up to 10⁶ nucleated cells per 98 µL of buffer.
 4. Add 2 µL of the antibody.
 5. Mix well and incubate for 10 minutes in the dark in the refrigerator (2–8 °C).
Note: Higher temperatures and/or longer incubation times may lead to non-specific cell labeling. Working on ice requires increased incubation times.
 6. Wash cells by adding 1–2 mL of buffer and centrifuge at 300×g for 10 minutes. Aspirate supernatant completely.
 7. (Optional) If biotinylated antibody was used, resuspend the cell pellet in buffer and stain with fluorochrome-conjugated anti-biotin antibody according to the manufacturer's recommendations.
 8. Resuspend cell pellet in a suitable amount of buffer for analysis by flow cytometry or fluorescence microscopy.

Examples of immunofluorescent staining

Peripheral blood mononuclear cells (PBMCs) from rhesus monkeys were stained with CD3 antibodies or with the corresponding REA Control (S) antibodies (left images) as well as with CD45 antibodies and analyzed by flow cytometry using the MACSQuant[®] Analyzer. Cell debris and dead cells were excluded from the analysis based on scatter signals and propidium iodide fluorescence or 4',6-diamidino-2-phenylindole (DAPI) fluorescence, as in the case of tandem conjugates.

Warranty

The products sold hereunder are warranted only to be free from defects in workmanship and material at the time of delivery to the customer. Miltenyi Biotec GmbH makes no warranty or representation, either expressed or implied, with respect to the fitness of a product for a particular purpose. There are no warranties, expressed or implied, which extend beyond the technical specifications of the products. Miltenyi Biotec GmbH's liability is limited to either replacement of the products or refund of the purchase price. Miltenyi Biotec GmbH is not liable for any property damage, personal injury or economic loss caused by the product.
